About this Manual

This *User's Manual* describes Mellanox Technologies Ethernet PCI Express Network Interface Cards. It provides details as to the interfaces of the card, specifications, required software and firmware for operating the card, and relevant documentation.

Intended Audience

This manual is intended for the installer and user of these cards.

The manual assumes basic familiarity with Ethernet networks.

Document Conventions

When discussing memory sizes, MB and MBytes are used in this document to mean size in mega bytes. The use of Mb or Mbits (small b) indicates size in mega bits.

1 Overview

This document is a *User's Manual* for Mellanox Technologies Ethernet Network Interface Cards (NICs) based on the MT25408 ConnectX[®] EN integrated circuit device. The cards described in this manual have the following main features:

- IEEE 802.3ae compliant
- Two 10GBASE-CX4 copper ports for connecting Ethernet traffic
- PCI Express 2.0 (1.1 compatible) through an x8 edge connector up to 5GT/s
- 'Media detect circuit' with powered connectors supporting the use of active cables and external PHY fiber solutions
- EU Restriction of Hazardous Substances (RoHS) compliant

The cards differ in:

- Bracket height: short or tall
- PCI Express 2.0 with SerDes speed: 2.5 GT/s or 5.0 GT/s

1.1 Adapter Cards

Table 3 on page 8 lists the Ethernet NICs described in this manual

Table 3 - Ethernet CX4 Network Interface Cards

Ordering Part Number (OPN)	PCI Express SERDES Speed	Data Transmission Rate	Short / Tall Bracket	RoHS Compliance	Adapter IC Part Number	NIC Photo ⁽¹⁾
MNEH28-XSC	2.5 GT/s PCIe Gen1	10 +10 Gb/s 2 ports	Short	RoHS-R5 (with exemption)	MT25408A0-FCC-SE	
MNEH28-XTC	2.5 GT/s PCIe Gen1		Tall			
MNEH29-XSC	5.0 GT/s PCIe Gen2	10 +10 Gb/s 2 ports	Short	RoHS-R5 (with exemption)	MT25408A0-FCC-TE	  <div>Short</div> <div>Tall</div>
MNEH29-XTC	5.0 GT/s PCIe Gen2		Tall			

1. The NICs have a similar form and fit. The main visible difference is in the bracket height.

1.2 Mellanox Part Numbering Legend

Table 4 describes the Mellanox Technologies adapter cards part numbering legend.

Table 4 - Mellanox Adapter Cards Part Numbering Key

Adapter Card OPN MHTS#I-XBR	Field	Decoder
M	Mellanox Technologies	
H	Adapter Type	H = InfiniBand Host Channel Adapter, N = Ethernet Network Interface Card, S = Express Module
T	Media	E = 10GBASE-CX4*, G = 10GBASE-CX4*, K = 10GBASE-SR (XFP), T = 10GBASE- UTP (Twisted Pair), P = 10GBASE-SR/LR (SFP+) Module-Less, M = 10GBASE-SR/LR (SFP+) Requiring Modules * = with powered connector
S	Silicon	H = ConnectX
#	# ports	1 = 1, 2 = 2,
I	Host Interface	8 = PCIe x8, 9 = PCIe (SerDes @ 5.0 GT/s)
G	Generation	<blank> = Initial product generation B = 2nd Generation board
-	Separator	
X	Memory Size	X = MemFree
B	Bracket	S = Short, T = Tall, N = None
R	RoHS	<blank> = non RoHS, C = RoHS w/ Exemption, R = RoHS Lead-Free

For example, the part number MNEH28-XTC describes Mellanox Technologies' ConnectX EN NIC with dual 10GBASE-CX4 ports, a PCIe2.0 x8 2.5GT/s interface, no on-board memory (mem-free), a tall PCI bracket, and RoHS R5 compliance. Using the legend,

- field M =M to indicate a Mellanox Technologies product,
- field H = N to indicate a Network Interface Card,
- field T =E to indicate 10GBase-CX4 (copper CX4 with media adapter support),
- field S =H to indicate the ConnectX family,
- field # =2 to indicate two ports,
- field I = 8 to indicate PCI Express 2.0 x8 running at 2.5GT/s,
- field X = X to indicate no on-board memory,
- field B = T to indicate a tall bracket, and
- field R = C to indicate RoHS R5 (w/ Exemptions) compliance

1.3 Finding the Mac Address and Serial Number on the Adapter Card

All Mellanox Ethernet NICs have a label on the printed side of the adapter card that has the card serial number and the card MAC address.

Figure 1: Product Label

2 Adapter Card Installation

2.1 Hardware and Software Requirements

Before installing the NIC, please make sure that the system meets the hardware and software requirements listed in Table 5.

Table 5 - Hardware and Software Requirements

Requirement	Description
Hardware	<ul style="list-style-type: none"> Minimum 3 GB of available space PCI Express x8 or x16 slots
Firmware and Software Operating Systems/Distributions	<p>For the latest firmware available please check http://www.mellanox.com/support/firmware_download.php</p> <p>Management Tools and Drivers</p> <p>Mellanox management tools can be found at: http://www.mellanox.com/products/management_tools.php</p> <ul style="list-style-type: none"> Linux Driver for ConnectX EN Based Network Interface Cards with 10GigE Support can be found at: http://www.mellanox.com/products/MLNX_Linux.php Windows Driver for ConnectX EN Based Network Interface Cards with 10GigE Support can be found at: http://www.mellanox.com/products/MTNIC%20_Windows.php Mellanox Ethernet Driver for Citrix XenServer 4.1, Mellanox ConnectX EN 10GbE Dual port NIC Support can be found at: http://www.mellanox.com/products/XenServer.php Novell SuSE Linux Enterprise server (SLES), Red Hat Enterprise Linux (RHEL), and other Linux distributions Microsoft Windows Server2003/2008, Windows Compute Cluster Server 2003

2.2 Installation Instructions

2.2.1 Installation Instructions as per Host Machine

The adapter cards listed in Table 3 on page 8 are standard PCI Express x8 cards each with a standard x8 edge connector. Please consult the host machine documentation for instructions on how to install a PCI Express card.

Note: When more than one PCI Slot is available first make sure to use the PCI slot with the proper configuration.

Any PCI slot with the proper configuration is acceptable for connection. If the card is installed in a PCI slot with less lanes than the card requires then the adapter card will not provide the optimum data transfer.

2.3 Safety Warnings

1. Installation Instructions

Read all installation instructions before connecting the equipment to the power source.

2. Over-temperature

This equipment should not be operated in an area with an ambient temperature exceeding the maximum recommended: 55°C (131°F). An air flow of 200LFM at this maximum ambient temperature is required. Moreover, to guarantee proper air flow, allow at least 8cm (3 inches) of clearance around the ventilation openings.

3. During Lightning - Electrical Hazard

During periods of lightning activity, do not work on the equipment or connect or disconnect cables.

4. Copper InfiniBand Cable Connecting/Disconnecting

Copper InfiniBand cables are heavy and not flexible, as such they should be carefully attached to or detached from the connectors. Refer to the cable manufacturer for special warnings and instructions.

5. Equipment Installation

This equipment should be installed, replaced, or serviced only by trained and qualified personnel.

6. Equipment Disposal

Disposal of this equipment should be in accordance to all national laws and regulations.

7. Local and National Electrical Codes

This equipment should be installed in compliance with local and national electrical codes.

3 Driver Software and Firmware

Drivers and Firmware can be downloaded and installed by using the Mellanox download site within the Mellanox Website.

Note: Make sure to open the Readme files and read them before you start the procedure.

Note: The installation requires administrator privileges on the target machine.

3.1 Driver Software

Mellanox Technologies supplies drivers for:

- CX EN Linux
- CX EN Windows
- VMware
- XEN

3.1.1 Driver Installation

1. Download the driver from Mellanox website
<http://www.mellanox.com/products/software.php>
2. Install the driver:

```
> tar xzf mlnx_en-X.X.tgz -  
> cd mlnx_en-X.X  
> ./install.sh
```

The driver installation procedure performs the following:

- Uninstalls previous version of mlnx_en or mtnc driver
- Builds and installs driver kernel modules
 - Copies all files to /tmp/mlnx_en/src
 - Applies backport patches for particular kernel/OS
 - Runs make to generate mlx4_core.ko, mlx4_en.ko
 - Copies them to /lib/modules/<kernel>/updates/kernel/drivers/net/mlx4/
 - Puts mlxnet script under /etc/init.d
 - Puts mlxnet.conf under /etc/mlxethernet
- Builds and installs mstflint FW burning tool
- Optimizes system settings for best network performance

3.1.2 Driver Loading

- Always use /etc/init.d/mlxnet script to load/unload the driver:

```
> /etc/init.d/mlxnet start
```
- Automatic driver loading on boot.

Edit /etc/mlxethernet/mlxnet.conf

- Change driver default settings.

Module parameters can be obtained with ‘modinfo’ command:

Add custom parameter settings to /etc/modprobe.conf

Parameter values are available in /sys/module/mlx4_en/parameters/

- Verify driver loaded successfully.

Driver will create new eth<x> device(s) visible with ‘ifconfig -a’

3.1.3 Driver Information

- Dumped to system log (/var/log/messages, dmesg)
- Can also be queried by ‘ethtool -i eth<x>’

3.2 Firmware and Firmware Tools

For Linux or Windows, download and install the latest Mellanox Firmware Tool Kit for your OS at:

http://www.mellanox.com/products/management_tools.php

Within the tool kit is the mstflint tool software package, which is also available at:

<https://svn.openfabrics.org/svn/openib/gen2/branches/1.1/src/userspace/mstflint/>.

You can download the latest firmware at:

http://www.mellanox.com/support/firmware_table_ConnectXEN.php

Follow the installation instructions included in the download package.

3.2.1 Updating Adapter Card Firmware

Each adapter card is shipped with the latest version of qualified firmware at the time of manufacturing. Firmware is updated occasionally, and the most recent firmware can be obtained from <http://www.mellanox.com> through the ‘Firmware’ downloads link, or you can download the latest firmware at:

http://www.mellanox.com/support/firmware_table_ConnectXEN.php.

3.2.2 Single Adapter Card Firmware Update

Firmware can be updated on the stand-alone single card using the **flint** tool of the *Mellanox Firmware Tools (MFT)* package. This package is available for download, along with its user’s manual, from the single adapter card firmware update page. See <http://www.mellanox.com> under ‘Firmware’ downloads.

A firmware binaries table lists a binary file per adapter card. The file name of each such binary is composed by combining the firmware name, the firmware release version, and the card part number.

Note: Please contact your assigned Field Application Engineer if you cannot find the firmware binary for your adapter card. This may happen if the product is not yet available for general distribution.

3.2.3 Firmware Version Check and Update

1. Check current FW version and card type (MT_XXXXXXXXXX).
ethtool -i eth<x> or
mstflint -d `lspci | grep “Ethernet controller: Mellanox” | cut -f1 -d" "` q
mstflint tool is provided in the driver package and is normally installed under /sbin
2. Obtain the latest FW image from Mellanox web site.
http://www.mellanox.com/support/firmware_table_ConnectXEN.php

3. Choose FW image matching you card OPN/PSID.
4. Burn latest FW.
`mstflint -d `lspci | grep "Ethernet controller: Mellanox" | cut -f1 -d" " -i <FW image> b`
Where FW image is a binary file, for example fw-25408-2_5_000-MNEH28-XTC_A1.bin
5. Reboot the server.

4 Adapter Card Interfaces

4.1 I/O Interfaces

Each adapter card includes the following interfaces:

- Two 4X copper connectors
- PCI Express x8 edge connector
- I/O panel LEDs
- I²C compatible connector (for debug)

4.1.1 Ethernet CX4 Interface

The ConnectX[®] EN 10GBase-CX4 device is compliant with the *IEEE Std 802.3ak 10GBASE-CX4*. It has two compliant 4X ports (1 and 2), each having four Tx/Rx pairs of SerDes. Each of the cards (listed in Table 3 on page 8) based on this device provides access to these ports by means of two 4X connectors for external copper cables. Connector 1 connects to port 1 of the device, while connector 2 connects to port 2.

Figure 2: Port Numbering

Each of the NIC cards is embedded with a ‘media detect circuit’ that supports active cables and external fiber solutions to be connected to the port connectors. Fiber Solutions require the use of active media converters.

4.1.2 PCI Express Interface

The ConnectX[®] EN -CX4 adapter cards support the PCI Express 2.0 x8 interface, 1.1 compatible. The NICs can be either a master initiating the PCI Express bus operations or a slave responding to PCI bus operations.

4.1.3 LED Assignment

The board has four LEDs located on the I/O panel - 2 LEDs per port. The green LED, when lit, indicates that the driver is running and a valid physical connection between nodes exists. The green LED, when blinking, indicates that the physical connection between nodes is problematic. The yellow LED when lit, indicates a valid data activity link, this is the logical link. The yellow LED illuminates when the network is discovered over the physical link. A valid

data activity link without data transfer is designated by a constant yellow LED indication. A valid data activity link with data transfer is designated by a blinking yellow LED indication. If the LEDs are not active, either the physical link or the logical link (or both) connections have not been established.

Figure 3: Physical and Logical Link Indications

Port Number	LED Name
Port 1	Physical Link - Green Constant on indicates a good physical link Blinking indicates a problem with the Physical link
	Data Activity - Yellow Blinking indicates Data Transfer Constant on indicates no Data Transfer
Port 2	Physical Link - Green Constant on indicates a good physical link Blinking indicates a problem with the Physical link
	Data Activity - Yellow Blinking indicates Data Transfer Constant on indicates no Data Transfer

Port 1

Port 2

Note: The short bracket has the same port and LED footprint as the tall bracket.

4.2 I²C Compatible Interface

A three-pin header on the adapter card is provided as the I²C compatible interface. See Figure 5 on page 23 for the location on the board.

Figure 4: I²C Connector

4.3 Power

All adapter cards receive power from the PCI Express Edge connector. All other required power voltages are generated by on-board switch mode regulators. For power consumption see Specifications starting on page 23.

4.4 Memory

The NICs support multiple memory devices through the PCI Express, Flash, and I2C-compatible interfaces.

4.4.1 System Memory

Each of the NICs utilize the PCI Express interface to store and access connection information and packet data on the system memory.

4.4.2 Flash

Each of the NICs includes one 2MB SPI Flash device (P/N M25P16-VME6G by ST Microelectronics) accessible via the Flash interface of the MT25408 ConnectX EN device.

There is a jumper on each adapter card that indicates to the device whether an on-board Flash device exists (or is to be used). Table 6 provides information on this jumper. See Figure 5 on page 23 for the jumper location.

Table 6 - Jumper Configuration

Description	Option	Card Default Configuration	Comments
Flash present/ not present	connection open – Flash present connection shorted – Flash not present 	connection open – Flash present	Header 1x2

4.4.3 EEPROM

Each board incorporates an EEPROM that is accessible through the I2C-compatible interface. The EEPROM is used for storing the Vital Product Data (VPD). The VPD format adheres to the *PCI Local Bus specification rev 2.3* VPD definition (see “VPDs” on page 19). The EEPROM capacity is 512 bytes.

4.5 VPDs

- The PCI VPD (Vital Product Data) layout for each of the described Mellanox Technologies ConnectX® EN - CX4 NICs cards comply with the format defined in the *PCI 2.3*.

Appendix A: Specifications

A.1 Board Mechanical Drawing and Dimensions

All the NICs covered in this *User's Manual* have the same mechanical drawing and share the same dimensions as depicted in Figure 5.

Note: All dimensions are in millimeters.

Figure 5: Schematic of the Ethernet NIC With CX4 Connectors

A.2 EMC Certification Statements

Table 11 lists the approved EMC certification status per adapter card in different regions of the world.

Table 11 - Adapter Cards EMC certification Status

Adapter Card P/N	FCC Class (USA)	EN Class (Europe)	ICES Class (Canada)	VCCI (Japan)	C-Tick (Australia and New Zealand)	MIC /BCC (Korea)	IEC/EN	cTUVus	CB
MNEH28-XSC,	A	A	A	A		✓	✓	✓	✓

Table 11 - Adapter Cards EMC certification Status

Adapter Card P/N	FCC Class (USA)	EN Class (Europe)	ICES Class (Canada)	VCCI (Japan)	C-Tick (Australia and New Zealand)	MIC /BCC (Korea)	IEC/EN	cTUVus	CB
MNEH28-XTC,	A	A	A	A					
MNEH29-XSC,	A	A	A	A					
MNEH29-XTC	A	A	A	A					

A.2.1 FCC

A.2.2 Statements (USA)

Class A Statements:

§ 15.21

Statement

Warning! Changes or modifications to this equipment not expressly approved by the party responsible for compliance (Mellanox Technologies) could void the user's authority to operate the equipment.

§15.105(a)

Statement

NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

A.2.3 EN Statements (Europe)

EN55022 Class A Statement: RF Emissions Control

Warning

This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

A.2.4 ICES Statements (Canada)

Class A Statement:

“This Class A digital apparatus complies with Canadian ICES-003.
Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.”

A.2.5 VCCI Statements (Japan)

Class A Statement:

この装置は、情報処理装置等電波障害自主規制協議会（VCCI）の基準に基づくクラスA情報技術装置です。この装置を家庭環境で使用すると電波妨害を引き起こすことがあります。この場合には使用者が適切な対策を講ずるよう要求されることがあります。

(Translation - "This is a Class A product based on the standard of the Voluntary Control Council for Interference by Information Technology Equipment (VCCI). If this equipment is used in a domestic environment, radio interference may occur, in which case the user may be required to take corrective actions.")

A.2.6 MIC Statement (Republic of Korea)

Korea's "Regulation for Certification of Information and Communication Equipment," requires EMC testing and certification for many electronic products. Korean EMC certifications are issued by Radio Research Laboratory (RRL), which is organized under the Ministry of Information and Communications (MIC). EMC testing includes electromagnetic emissions (EMI) and susceptibility (EMS). Certified equipment is labeled with the MIC mark and certification number.

Class A Statement:

이 기기는 업무용으로 전자파적합등록을 한 기기이오니 판매자 또는 사용자는 이 점을 주의하시기 바라며 만약 잘못 판매 또는 구입하였을 때에는 가정용으로 교환하시기 바랍니다.

Translation:

Class A Device: This device is registered for EMC requirements for industrial use. The seller or buyer should be aware of this. If this type was sold or purchased by mistake, it should be replaced with a residential-use type.

A.3 MNEH28-[XTC, XSC] Specifications

Table 12 - Specifications for MNEH28-[XTC XSC]

Physical		Power and Environmental	
Size: Air Flow: 4X 20Gb/s Connector:	2.54in. x 5.37in. (64.4mm x 136.47mm) 200LFM @55°C InfiniBand (Copper, current rating: 0.5A max) with active media adapter support	Voltage: Typ. Power dual port operation: Maximum Power dual port operation: Temperature:	12V, 3.3V 9.63W 10.89W 0°C to 55°C
Protocol Support		Regulatory

Appendix B: Interface Connectors Pinout

B.1 I²C-compatible Connector Pinout

Figure 6: I2C-Compatible Connector

Table 14 - I2C-Compatible Connector Pinout

Connector Pin Number	Adapter Card Signal Name
1	SPSDA
2	SPSCL
3	GND
4	NC
5	NC

B.2 Ethernet Connector Pinout

Figure 7: ConnectX CX4 Copper Connector Pinout

Table 15 - Connector Pin To Port Signal Name

Connector Pin Number	Connector Pin Name	IB Port A Signal Name	IB Port B Signal Name
S1	IBtxIp(0)	Rx_A1	Rx_B1
S2	IBtxIn(0)	Rx_A0	Rx_B0
S3	IBtxIp(1)	Rx_A3	Rx_B3
S4	IBtxIn(1)	Rx_A2	Rx_B2
S5	IBtxIp(2)	Rx_A5	Rx_B5
S6	IBtxIn(2)	Rx_A4	Rx_B4
S7	IBtxIp(3)	Rx_A7	Rx_B7
S8	IBtxIn(3)	Rx_A6	Rx_B6
S9	IBtxOn(3)	Tx_A6	Tx_B6
S10	IBtxOp(3)	Tx_A7	Tx_B7
S11	IBtxOn(2)	Tx_A4	Tx_B4
S12	IBtxOp(2)	Tx_A5	Tx_B5
S13	IBtxOn(1)	Tx_A2	Tx_B2
S14	IBtxOp(1)	Tx_A3	Tx_B3
S15	IBtxOn(0)	Tx_A0	Tx_B0
S16	IBtxOp(0)	Tx_A1	Tx_B1
G1-G6, G9, H1-H2	Signal Ground	GND	GND
G7 ¹	Sense-3.3V	SENSE_P1	SENSE_P2
G8	Vcc	MC_POWER_P1	MC_POWER_P2

1. The Sense-3.3V signal is used to enable the Vcc power supply pin (G8) used to provide power to the active media adapter.

B.3 PCI Express x8 Connector Pinout

These cards use a standard PCI Express x8 edge connector and the PCI Express x8 standard pinout according to the PCI Express 2.0 specification.

Appendix C: Replacing Existing Bracket on Adapter Cards

Adapter cards come in two bracket heights. If your adapter card has a bracket that is not compatible with your platform, this appendix provides instructions on how to remove a bracket from a standard Mellanox Technologies adapter card and replace it with a different one. It includes the following sections:

- “Removing Bracket”
- “Placing a Kapton® Polyimide Label” “Assembling a New Bracket”

Figure 8 shows the bracket-side view of a dual-port Adapter card.

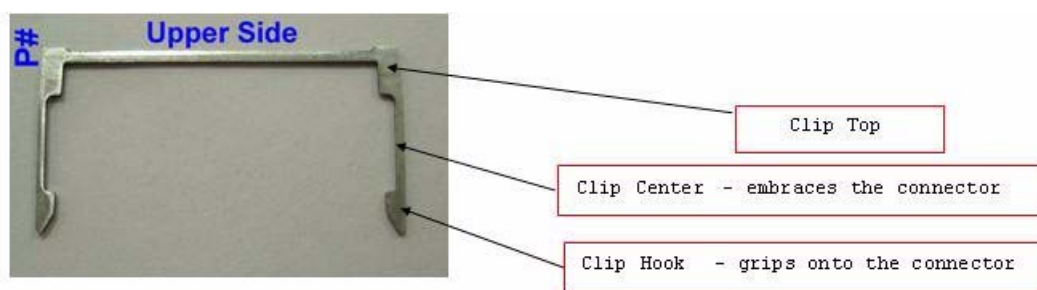

Figure 8: Tall Bracket of a Dual IB Port Adapter Card

C.1 Removing Bracket

Figure 9 shows a connector retention clip and the designated names of its sections.

Figure 9: Connector Retention Clip

1. Using a small flat head screwdriver, gently push up one hook of a connector's clip toward the connector's top side as shown in Figure 10 (a) on page 31.
2. Then push the other hook each of the two clip's hook towards the connector's top side - see Figure 10 (b). Finally, pull the clip away from its center - see Figure 10 (c).

Figure 10: Extracting Connector Clip

(a) Gently Push One Hook of Clip

(b) Gently Push Other Hook of Clip

(c) Pull Clip Away

3. Repeat the above actions for the second connector's clip.
4. Unscrew both screws from the card using a torque screwdriver as shown in Figure 11.

Figure 11: Unscrew Bracket Screws

5. Grip the bracket as shown in Figure 12, placing your thumb on the LED component.
6. In a rotating move toward the component side of the card, slide the bracket out of the connectors (Figure 12 (c)).
7. Gently hold your thumb on the LED component.
8. At the same time extract the bracket as shown in Figure 12 c, (Make sure to protect the LED while extracting the bracket).

Figure 12: Rotate the Bracket to Detach it From the Card

(a) Card without Clips and Screws

(b) Grip the Card in preparation for Detachment

(c) Rotate the bracket toward the Component Side.

C.2 Placing a Kapton[®] Polyimide Label

Prior to assembling the bracket, you need to apply a Kapton[®] polyimide round label on the board's Print Side.

Note: Check to see if the label is already installed as this label may have been installed at the factory.

Note: The label can be provided by Mellanox Technologies (P/N: MEC000821).

The following steps are instructions for placing the polyimide label:

1. Make sure your working area is ESD protected.
2. Hold the label with light pincers. See Figure 13.

Figure 13: Hold Kapton Label With Pincers

3. Gently place the label as shown in Figure 14. Make sure to align the center hole of the label with the drilled hole in the board.

Figure 14: Place Label on Print Side With Label's and Card's Holes Aligned

4. After placing the label, complete the process by (gently) sweeping your thumb on the label to assure the label is well-attached onto board. See Figure 15.

Figure 15: Ensure That Label is Well-attached

See also Figure 23, “Print Side View After Bracket Assembly With Kapton Label,” on page 37.

Now your card is ready for a new bracket assembly.

C.3 Assembling a New Bracket

The bracket can now be assembled onto the Adapter card. See Figure 16.

Figure 16: Adapter Card Ready for New Bracket

Gently place the bracket onto the card fitting the connectors through the bracket connector holes. Make sure the LEDs are aligned into their intended bracket holes.

Insert a screw along with a washer into each of the two holes on the card intended for holding the bracket.

Figure 17: Place Bracket onto Card

5. Use a torque screwdriver to apply up to 2 lbs-in torque on each screw.

Figure 18: Attach Bracket onto Card using Screws

6. Gently push one clip onto the connector. Make sure to slide both clip hooks (sides) around the connector evenly as shown in Figure 19.

Figure 19: Sliding Connector Clip Evenly

7. Use a small flat head screwdriver to gently slide the clip's hook towards the connector's base side as shown in Figure 21.

Figure 20: Fix Clip Hooks into Place Using Screwdriver

Figure 21: Spread the Hooks to Slide on the Clip

8. Repeat this step for the second clip. See Figure 22 for the assembled new bracket (side) view, and Figure 23 for the Print Side view showing the Kapton label

Figure 22: Assembled Bracket View

Figure 23: Print Side View After Bracket Assembly With Kapton Label

Figure 24: Print Side View After Bracket Assembly With Kapton Label

Appendix D: Avertissements de sécurité d'installation

1. Instructions d'installation

Lisez toutes les instructions d'installation avant de brancher le matériel à la source d'alimentation électrique.

2. Température excessive

Ce matériel ne doit pas fonctionner dans une zone avec une température ambiante dépassant le maximum recommandé de 55°C (131°F). Un flux d'air de 200LFM à cette température ambiante maximale est nécessaire. En outre, pour garantir un bon écoulement de l'air, laissez au moins 8 cm (3 pouces) d'espace libre autour des ouvertures de ventilation.

3. Orages – dangers électriques

Pendant un orage, il ne faut pas utiliser le matériel et il ne faut pas brancher ou débrancher les câbles.

4. Branchement/débranchement des câbles InfiniBand en cuivre

Les câbles InfiniBand en cuivre sont lourds et ne sont pas flexibles, il faut donc faire très attention en les branchant et en les débranchant des connecteurs. Consultez le fabricant des câbles pour connaître les mises en garde et les instructions spéciales.

Copper InfiniBand cables are heavy and not flexible, as such they should be carefully attached to or detached from the connectors. Refer to the cable manufacturer for special warnings and instructions.

5. Installation du matériel

Ce matériel ne doit être installé, remplacé ou entretenu que par du personnel formé et qualifié.

6. Élimination du matériel

L'élimination de ce matériel doit s'effectuer dans le respect de toutes les législations et réglementations nationales en vigueur.

7. Codes électriques locaux et nationaux

Ce matériel doit être installé dans le respect des codes électriques locaux et nationaux.

Appendix E: Installation - Sicherheitshinweise

1. Installationsanleitungen

Lesen Sie alle Installationsanleitungen, bevor Sie das Gerät an die Stromversorgung anschließen.

2. Übertemperatur

Dieses Gerät sollte nicht in einem Bereich mit einer Umgebungstemperatur über der maximal empfohlenen Temperatur von °C (°F) betrieben werden. Außerdem sollten mindestens 8 cm (3 in.) Freiraum um die Belüftungsöffnungen sein, um einen einwandfreien Luftstrom zu gewährleisten.

3. Bei Gewitter - Elektrische Gefahr

Arbeiten Sie während eines Gewitters und Blitzschlag nicht am Gerät, schließen Sie keine Kabel an oder ab.

4. Anschließen/Trennen von InfiniBand-Kupferkabel

InfiniBand-Kupferkabel sind schwer und nicht flexible. Deshalb müssen sie vorsichtig an die Anschlüsse angebracht bzw. davon getrennt werden. Lesen Sie die speziellen Warnungen und Anleitungen des Kabelherstellers.

Copper InfiniBand cables are heavy and not flexible, as such they should be carefully attached to or detached from the connectors. Refer to the cable manufacturer for special warnings and instructions.

5. Geräteinstallation

Diese Gerät sollte nur von geschultem und qualifiziertem Personal installiert, ausgetauscht oder gewartet werden.

6. Geräteentsorgung

Die Entsorgung dieses Geräts sollte unter Beachtung aller nationalen Gesetze Bestimmungen erfolgen.

7. Regionale und nationale elektrische Bestimmungen

Dieses Gerät sollte unter Beachtung der regionalen und nationalen elektrischen Bestimmungen installiert werden.
